

23/7/26

COI - ASSESSMENT 2

CONCEPT MAPPING

1. Construct a concept map illustrating the complete Machine learning workflow predicting house prices using suitable ML algorithm.

a, Identifying the key terms :-

1. High cost

2. Low cost

3. Area

4. construction quality.

5. Land measurement

b, Relation ship table :-

1	2	3
Sample data	training design	linear regression

c, Demonstration of data set :-

data set :

SNO	Area	Type of House	Price	geniune or not
1.	Chennai	3BHK	15 crores	geniune
2.	Hydrabad	1BHK	20 lakhs	not geniune
3.	Bengaluru	Villa	1 Million	not geniune
4.	Mumbai	2BHK	10 crores	geniune

(Sample data set)

d. Designing the data flow diagram

e. concept map :-

2. Construct a concept map demonstrating how classification algorithms are used in medical disease prediction (eg: diabetes or heart disease prediction).

a. Identifying the key terms:-

1. Sugar levels
2. Pulse rate
3. Blood pressure

b. Relationship table:-

1	2	3
medical data	training model	classification.

c. Demonstration of dataset:-

Data set:

SNO	Sugar levels	Pulse	Blood Pressure	Diabetes/Heart disease
1.	140	40	70	Diabetes
2.	120	60	120	Heart disease
3.	100	120	80	Heart disease
4.	125	75	70	Diabetes.

d. Designing the data-flow diagram :-

e. Concept map :-

medical disease prediction

testing model

evaluating the model

redeploying model

3. Construct a concept map showing how machine learning is applied in credit card fraud detection.

a. Identifying the key terms :-

1. Transaction ID
2. Location of payment
3. Amount
4. No. of transactions.

b. Relationship table :-

transaction data	→ training model →	Classification
------------------	--------------------	----------------

c. Demonstration of dataset :-

Dataset :-

SNO	Name	no. of payment	Fraud / or not
1.	John	172	fraud
2.	Ran	5	not fraud
3.	Wen	15	not fraud
4.	Kevin	500	fraud

d) Designing the data-flow diagram :-

e) Concept map :-

4. Concept map explaining student performance prediction using the multiple regression algorithm.

a. Identifying the key terms :-

1. Marks
2. Performance
3. Behaviour

b. Relationship table :-

1	2	3
student data	→ training model	→ classification

c. Demonstration of dataset :-

Dataset :-

SNO	Name	Marks	Behavior	Performance
1.	Jon	97	54	Average
2.	Van	95	92	Good
3.	Raju	99	97	Excellent

d. Designing the dataflow diagram :-

c. concept map -

⑤

Decision tree Classification
approval prediction.

use of loan

Identifying the key terms:-

1. Assurity
2. Purpose
3. Amount

Relationship data :-

Sample data $\rightarrow$ training model $\rightarrow$ classification algorithm.

c) Demonstration of dataset :-

SNO	Loan	Amount	Fraud or not
1	Home	120,000	not fraud
2	Education	1 million	Fraud
3	Home	2,00,000	not fraud

d) designing the data flow :-

e, concept map: -

✓
